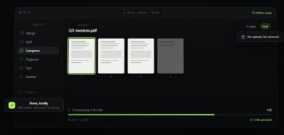
● CLIENT-SIDE PDF TOOLKIT · NO UPLOAD, EVER

Your PDFs. Your device.

Every tool you need to merge, split, compress, sign and convert — running inside this tab.
No uploads. No accounts. No nonsense.

Drop a PDF or image here
or browse files · stays on this device Browse ↗

0 bytes uploaded · works offline · no limits · no account



26 working tools, one workspace. · Built like a tool, not a funnel.

THE TOOLKIT

Everything PDF. Nothing uploaded.

Free tools that run entirely in your browser. Pick one, or drop a file above and start from there.

Find a tool — merge, redact, sign...

All · Ready · Essentials · Edit & sign · Convert · Clean & inspect

Essentials
9 ready

Merge
Combine files, reorder them, download one PDF.
POPULAR

Split
Extract pages or split into ranges and single pages.
POPULAR

Compress
Hit a size target. See exactly what it saved.
POPULAR

Organize
Reorder, rotate, duplicate and delete visually.

Rotate
Turn every page, or only the sideways ones.

Remove pages
Delete pages without leaving a trace.

Extract pages
Keep only the pages you choose.

Add blank pages
Make room for notes, at the start, end or middle.

Duplicate pages
Repeat a page for print runs or templates.

Batch
Run one recipe across many documents.
IN BUILD

Edit & sign
6 ready

Sign
Draw a signature, place it, download.
POPULAR

Watermark
Text watermarks with real opacity and angle.

Page numbers
Numbers that look like they were always there.
POPULAR

Header / footer
Titles, dates and page counts on every page.

Crop
Trim margins with a non-destructive crop box.

Resize
A4, Letter, Legal — fit or stretch.

Add QR
Generate a QR code and stamp it on a page.
IN BUILD

Fill forms
Detect and fill PDF form fields.
IN BUILD

Convert
6 ready

PDF to JPG
PNG, JPG or WebP at the DPI you choose.
POPULAR

JPG to PDF
JPG, PNG and WebP into one tidy PDF.
POPULAR

PDF to text
Extract the real text layer, page by page.

Text to PDF
Turn plain text into a clean, readable PDF.

Contact sheet
Every page as a labelled thumbnail grid.

Bundle to ZIP
Bundle a batch of PDFs for one download.

OCR
Make scans searchable, in your browser.
IN BUILD

Extract images
Pull every embedded image out of a PDF.
IN BUILD

Clean & inspect
5 ready

Sanitize
Strip metadata, scripts, attachments, annotations.
POPULAR

Metadata
Read and rewrite title, author, subject, keywords.

Inspect
Pages, size, dimensions, text layer, metadata.
POPULAR

Flatten
Bake forms and annotations into the page.

Invert / gray
Dark-mode PDFs, or calm monochrome.

Compare
See what changed between two versions.
IN BUILD

Redact
Truly remove sensitive text and areas.
IN BUILD

Protect
Password-encrypt a document.
IN BUILD

Unlock
Remove a password you own.
IN BUILD

Repair
Attempt recovery of a damaged document.
IN BUILD

Page count
Total pages and size across many PDFs.
IN BUILD

ONE WORKSPACE

Drop once. Do everything.

Most PDF sites make you upload the same file again for every tool. Docsy keeps your files in a local tray, so you can merge, then compress, then sign — without a single round trip.

- ✓ Files persist across tools while the tab is open
- ✓ Outputs can go straight back into the tray
- ✓ Nothing is written to a server, ever
- ✓ Close the tab and it is gone — by design

PRIVACY BY ARCHITECTURE

The file never leaves your device.

This is not a policy promise. It is how the software is built. There is no upload endpoint to call, no bucket to leak and no account to breach — because there is no account.

No waiting room
No queues, no "preparing your file", no server round trip.

Offline capable
Install it, switch off the network, keep working.

No account
No email, no login, no upload history.

No watermark
Your output is your output. We do not brand it.

● WHAT LEAVES YOUR DEVICE

Nothing.

- ✓ No analytics or tracking pixels
- ✓ No third-party fonts or CDNs
- ✓ No crash reporting
- ✓ No cookies, no fingerprinting
- ✓ No document processing on a server

Runtime guard active — external requests are blocked and counted.

THE HONEST PART

Some tools genuinely need network access or heavier libraries. When we add one — OCR language data, for example — it will be labelled **before** you use it, never quietly fetched in the background.

We also will not call a re-rendered PDF "lossless", a drawn signature "certified", or a password prompt "encryption" until it actually is.

HOW IT WORKS

Three steps. No round trip.

01
Drop it in
Choose a file or drag it onto the page. Docsy reads it straight from disk into this tab.

02
Pick a tool
Merge, split, compress, sign, convert, sanitize. Switch tools without re-uploading.

03
Take it back
Download the result. It is created in memory and never passes through a server.

No upload · No sign-up · No watermark · No daily limit · No "premium" tease · No server queue

QUESTIONS

Ask the uncomfortable ones.

The PDF industry is full of dark patterns. Here is where Docsy stands.

- Is this actually free?
- Where do my files go?
- Does it work offline?
- Why are some tools marked "In build"?
- Can it handle a huge PDF?
- Is a drawn signature legally binding?
- Do you track anything?

Drop a PDF. See for yourself.

No account wall. No upload bar. Just the file, the browser, and you.
